

Application No.: 09/989,111**Docket No.: 30004772-1 US****Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (*Currently amended*) A method of generating a dynamically updated web page through use of first and second network elements communicating over a short range wireless network, comprising the steps of:

(i) passing a first data set from the first network element to the second network element over the short range wireless network via a short range wireless network connection;

(ii) passing a second data set from the second network element to the first network element over the short range wireless network via a short range wireless network connection;

and

(iii) aggregating the first and second data sets; and

(iv) ~~forming to form a~~ dynamically updated web page that is dynamically updated to represent the information included in both the first and second data sets by responding to the aggregated first and second data sets as passed over the short range data network via the short range wireless network connections, the short range wireless network connections having a range that is considerably shorter than cellular data transfer protocols and a considerably higher data transfer rate than cellular data transfer protocols.

Application No.: 09/989,111**Docket No.: 38004772-1 US**

2. (Canceled)

3. (Currently amended) The method of claim 1, further including the steps of polling by at least the first network element ~~in order to ascertain element; ascertaining~~ if there is a network element within the short range wireless network connection range by responding to the polling; and ~~allowing~~ causing said network element (a) to connect to the short range wireless network and (b) contribute information to the networked information resource as it connects to the short range wireless network.

4. (Canceled)

5. (Previously presented) The method of claim 1, further comprising storing a script for a web page on at least one of the network elements.

6. (Previously presented) The method claim 1, further comprising the step of accessing the web page via a graphical user interface.

7. (Currently amended) The method of claim 1, further comprising the step of routing the passage of data between the first and second network elements through a third network element of the short range wireless network.

8. (Currently amended) The method of claim 7, further comprising accessing the networked information resource via the third network element, which forms an access point between the short range wireless network and another network.

9. (Previously presented) The method of claim 1, further comprising providing a server in the form of any one of the network elements.

Application No.: 09/989,111**Docket No.: 30004772-1 US**

10. *(Currently amended)* The method of claim 1, further comprising restricting access to some or all of the data stored on any one of the network elements of the short range wireless network by any other of the network elements of the short range wireless network.

11. *(Currently amended)* The method of claim 1, further comprising the step of repeatedly broadcasting a network address associated with the web page from a beacon at a first location, the beacon having a range that is considerably shorter than that of cellular data transfer protocol.

12. *(Previously presented)* The method of claim 10, wherein the network address is in the form of a URL.

13. *(Currently amended)* The method of claim 11, further comprising the step of repeatedly broadcasting the network address via a second beacon at a second location, the second location being an access point connected to the network address and to a network different from the short range wireless network, the second location access point transferring information between the network address and the different network.

14. *(Previously presented)* The method of claim 1, wherein at least one of the first and second network elements is in the form of a mobile telecommunications device.

15. *(Canceled)*

16. *(Currently amended)* The method of claim 1, wherein at least one of the first and second network elements includes a long-range, cellular transceiver that communicates the dynamically updated web page to a cellular network.

Application No.: 09/989,111Docket No.: 30004772-1 US

17. (*Currently amended*) The method of claim 451, further comprising the step of accessing the networked information resource via a cellular transceiver associated with another network element.

18. (*Currently amended*) A web page generation system comprising a short range wireless network, a first network element, and a second network element, the first and second network elements being adapted to be coupled to the short range wireless network via short range wireless network couplings such that at least the first network element has a short range wireless transmitter for short range wirelessly broadcasting a signal including a first data set, the second network element having a short range transceiver for short range wirelessly transmitting to the first network element another signal including a second data set and for wirelessly receiving the signal including the first data set only in response to the first network element being within short range wireless network coupling range, and a processor programmed to request information from the first network element and ~~to aggregate for aggregating~~ the first and second data sets, as transmitted via the short range wireless network, to form a web page that is dynamically updated to represent the information included in both the first and second data sets, the short range wireless network couplings having a range that is considerably shorter than cellular data transfer protocols and a considerably higher data transfer rate than cellular data transfer protocols.

19. (*Previously presented*) The system of claim 18, wherein the at least first network element is arranged to provide information to the networked information resource via at least one of the wireless network couplings.

Application No.: 09/989,111

Docket No.: 30004772-1 US

20. *(Previously presented)* The system of claim 19, wherein the information is provided in response to a request from the at least second network element.

21. *(Canceled)*

22. *(Previously presented)* The system of claim 18, wherein at least one of the first and second network elements is a mobile telecommunications device.

23. *(Canceled)*

24. *(Currently amended)* The system of claim 18, wherein at least one of the short range wireless network couplings includes either an infra-red or a radio-frequency coupling.

25. *(Previously presented)* The system of claim 18, wherein further including a third network element.

26. *(Previously presented)* The system of claim 25, wherein the third network element includes a transceiver.

27. *(Previously presented)* The system of claim 25, wherein the third network element is arranged to mediate the passage of the information between the first and second network elements.

28. *(Previously presented)* The system of claim 18, further including a server.

29. *(Previously presented)* The system of claim 28, wherein at least one of the network elements acts as the server.

Application No.: 09/989,111**Docket No.: 30004772-1 US**

30. *(Previously presented)* The system of claim 28, wherein the server is arranged to store a script for the web page.

31. *(Currently amended)* The system of claim 18, further including a beacon for repeatedly broadcasting a network address associated with the networked information resource at a first location.

32. *(Previously presented)* The system of claim 18, further including an access point from which the networked information resource can be accessed.

33. *(Previously presented)* The system of claim 32, wherein the system comprises a server and wherein the access point is arranged to couple a signal including web page data to the server.

34. *(Currently amended)* The system of claim 32, wherein a second beacon is arranged to repeatedly broadcast the network address at a second location, and a second access point is arranged to couple a signal including the dynamically updated web page data to the network address corresponding to the networked information resource.

35. *(Currently amended)* The system of claim 18, further including an access filter for restricting access to data stored on any one of the network elements by any other of the short range network elements.

36. *(Canceled)*
